

Super Acoustic Resonance Clarifier™

Please read this manual in its entirety before setting up the Super-ARCH.

Thank you for purchasing Gingko Audio's patent-pending Super Acoustic Resonance Clarifier™ (Super-ARCH™). The ARCH's unique shape, construction, and design features will give you many options to transform and enhance the sound of your audio system.

Although the Super-ARCH was designed primarily for use under speakers, it may be used to good effect under heavier components such as amplifiers. The Super-ARCH is sold in sets of 8 bases; each base can support up to 30 lbs. For lighter components, we offer the Mini-ARCH, sold in sets of 12 bases, each of which can support up to 5 lbs.

Each Super-ARCH base has a short hole drilled into the top center of the ARCH. The hole marks the spot where speaker spikes or spike mounting studs can rest. If you are using the Super-ARCH under a component other than a speaker, place a base under each of the component's feet.

INSTALLATION AND OPERATING INSTRUCTIONS

Installing the Super-ARCH under a speaker requires you to tip the speaker slightly so that the ARCH can be installed under each corner. To avoid damage to your speaker and/or to the ARCH, we strongly recommend that you enlist the help of a friend before starting. Have your friend tilt the speaker while you place the ARCH. Hold the ARCH in place until your friend has lowered the speaker to the floor.

There are three ways of using the Super-ARCH:

1. If your speakers come with spikes, place the tip of each spike into the hole on the ARCH.
2. Try using the Super-ARCHs in place of the spikes. Most spikes are attached to the speaker cabinet by threaded studs. Remove the spikes, one at a time, from the speaker. Screw the threaded studs into the holes on the ARCH, then screw the ARCH onto the cabinet. We find that the speakers perform better without the spikes.
3. If your floor is level and you do not need to use the threaded studs to level the speakers, you may try inserting the threaded studs into a larger hole on the Super-ARCH. This way, the ARCH bases support the bottom of the wooden cabinet directly without the ill effects of the metal studs.

Now, pick favorite music tracks that you frequently play on your current system. Listen to your test tracks for improvements in sound clarity, transient attacks, expansion of the soundstage width and depth, bass performance, and overall transparency. If the improvements are significant, sit back and enjoy the music for at least a week to

let yourself become familiar with the new “Super-ARCH sound.” Then remove the Super-ARCH bases and see if you miss them. We offer a 30-day money back guarantee on all the ARCH models. If you are not convinced that they provide significant improvements to your sound, simply return them for a refund minus shipping cost.

The ARCHs are warrantied against manufacturer’s defects for 90 days after purchase. Keep them away from moisture or a high humidity environment, which may weaken their wood-based structure.

For questions, contact us at gingko@gingkoaudio.com. Do give us feedback on your experience using the ARCH. You may also register your ARCH products on the Gingko Audio web site, www.gingkoaudio.com.
